The Ninja Pool aquatic rehabilitation system in Tel Hashomer Hospital

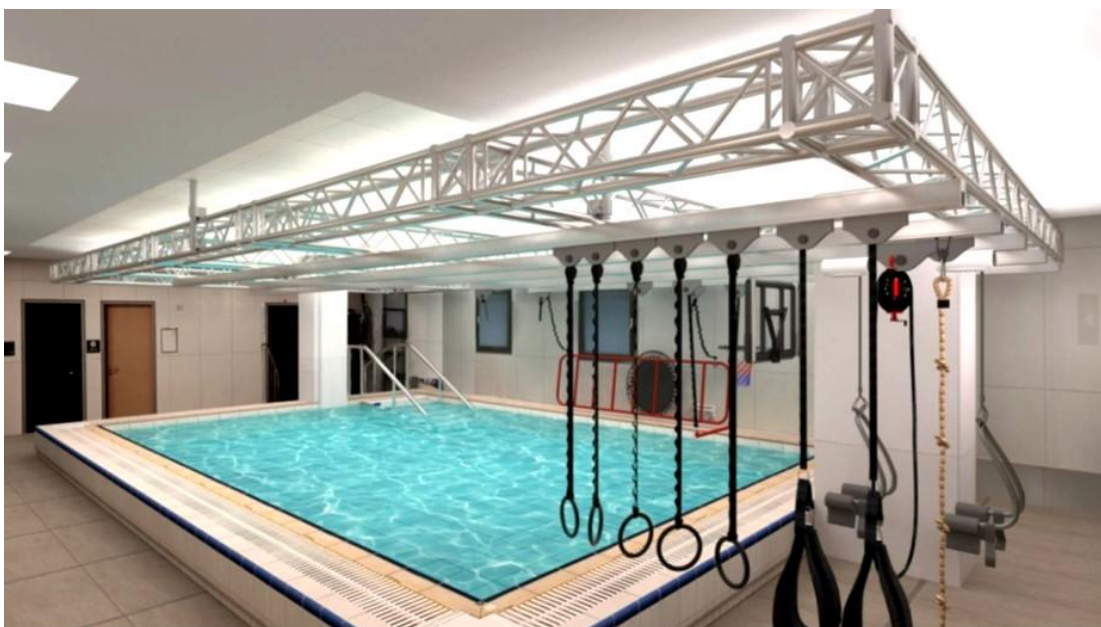

## **About the Ninja Pool System**

Ninja Pool is an aquatic rehabilitation and training system that is installed above a swimming or hydrotherapy pool. It contains tracks, straps, and electric lifts at varying heights that enable people in rehabilitation or training to engage in different types of exercise.

The Ninja Pool system is installed in Sheba Medical Center, Tel Hashomer, as well as in five hospital pools in Nahariya, Haifa, Tel Aviv, Jerusalem, and Be'er Sheva. It will soon be installed in Emek Medical Center and in Tzafon Medical Center (formerly Poriya Hospital). It is also a feature in water parks and hotels in Europe.

## **An Aquatic Exercise System that Combines Rehabilitation, Sports, and Fun**

- The Ninja Pool system can be supported by four pillars or suspended from the ceiling
- The exercise equipment is suspended over the water and accessible to therapists
- The height and distance of the exercise equipment can be changed and even used outside the Ninja Pool system
- The Ninja Pool system contains an electric lift that moves along a track. The lift can be used to bring patients into and out of the pool, and also to suspend training equipment

## The Electric Lift and Track

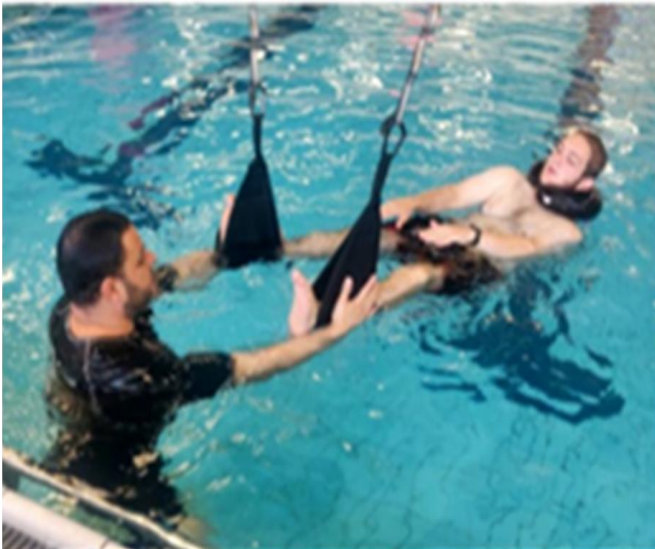

The Ninja Pool aquatic rehabilitation system includes an electric lift that can be used to bring patients into and out of the pool, and to move equipment.

Ninja Pool uses lifts such as those produced by Handicare RoMedic

- The maximum length of the track is 30 meters. The location and length of specific tracks are determined together with the pool's professional staff
- In addition to bringing patients into and out of the pool, the track and lift can also be used to move and suspend training and rehabilitative equipment
